

TEXT & GRAPHIC DECALS
EASY
APPLICATION INSTRUCTIONS

This pressure-sensitive text graphic and/or decal graphic for your vehicle's body OR windshield looks great (*almost* as good as the automobile itself!) It is very easy to apply also:

- (1) Clean the site where the decal will be applied with soap **and** a solvent such as rubbing alcohol or Goo Gone, then **rinse (H₂O)** and **dry** the application area. Also, wash your hands well in case you come into contact with the adhesive side of the decal.
- (2) Now sprinkle the cleaned area with a mixture of 1 cup water and one drop of liquid soap like Dawn, or just pass a sponge [soaked in the mixture] across it so that some water droplets stick to the application area- *this step allows you to carefully move the text/decal graphic on a slick surface just in case it must be repositioned.*
- (3) First, smooth the entire decal over with your hand and then peel one semi-clear layer off (thus the letters/graphics will stick to the remaining semi-clear layer, adhesive side *exposed*). Next, gently lay the entire decal across the application site (do **NOT** press it down yet)- if you can, center it on the first try even though you can still carefully move it thanks to STEP 2 ☺
- (4) Once centered on the application site- which you can easily verify by viewing the decal from a distance- you may use a dull/flat object, such as a squeegee or credit card (they're not *just* for autothings) to **apply pressure** and rub on the entire decal.
- (5) Finally and slowly, peel off the semi-clear layer by pulling it parallel to the application site (meaning don't pull it straight up), leaving behind the text/decal graphic. Also, you can use a tiny pin to pierce any letters or graphics if a stubborn bubble proves difficult to rub out. For added security, gently rub the entire decal once over the next day to insure adhesiveness and avoid getting a carwash for 24 hours since those high-powered jets and brushes are sometimes **too** strong, lol.

△ **PRECAUTIONS** △

Do not apply this text or graphic decal in **very** cold/warm weather. Allow your vehicle to cool/warm inside a garage for either vehicle body or window applications. Also, do not apply your decal during a *windy* day, as it cannot be reused if the adhesive side touches the ground after an accidental fall. If the decal is long (and most text decals are), it can easily fold in upon itself during a wind gust, which will ruin it. Keep these helpful tips in mind and you'll do great!

WE HOPE YOUR VEHICLE LOOKS EVEN SWEETER NOW!
