

These pressure-sensitive decal inserts for your Ford Mustang's bumper OR windshield look great (*almost* as good as the car itself!) and they are *extremely* easy to apply also:

- (1) Clean the recessed letters where the decals will be applied with soap **and** a solvent such as rubbing alcohol or Goo Gone, then **rinse** and **dry** the application area. Also, wash your hands well.
- (2) Now sprinkle the cleaned area with a mixture of 1 cup water and one drop of liquid soap, or just pass a sponge [soaked in the mixture] across it so that some water droplets stick to the application area – *this step allows you to move the letters in case they must be repositioned.*
- (3) Do this step letter by letter. Peel a letter off the backing paper (avoid touching the adhesive side) and apply that letter to its' corresponding area in your bumper – if you can, center it on the first try even though you can still carefully move it thanks to STEP 2 ☺
- (4) Finally, you want to rub the letters down to remove any water droplets or air pockets that remain behind them, thus bonding them to the bumper (remember, the letters are pressure-sensitive).

Experience has shown that doing this with an absorbent material such as a cloth or towel helps immediately dry the area – simply use your finger to smooth out remaining pockets by pressing each letter from the center out to the edges where water and/or air can escape. You may use a tiny pin to pierce the letter if a stubborn bubble proves difficult to rub out. For added security, gently rub the letters once over the next day to insure adhesiveness and avoid getting a carwash for 24 hours since those high-powered jets and brushes are sometimes **too** strong, lol.

Info :: We computer-cut these decals so that they cover the flat area of the Mustang bumper's recessed letters as well as *most* of the slanted walls of each letter. This is done so that your Mustang bumper will look really **great** no matter which angle it is viewed from. Because your bumper's letters have so many curves, certain letters like the "M" must be centered to achieve the best results – this means apply from the center, not the edge of letter.

△ PRECAUTIONS △

Do not apply these decals in **very** cold/warm weather. Allow vehicle to cool/warm inside a garage for either vehicle body or window applications. Also, do not apply decals during *windy* days, because they cannot be reused if the adhesive side touches the ground after an accidental fall.

WE HOPE YOUR MUSTANG LOOKS EVEN SWEETER NOW!
