

## MUSTANG ROCKER STRIPES EASY APPLICATION INSTRUCTIONS

These pressure-sensitive decal race stripes for your Ford Mustang's rocker panels look great (*almost* as good as the car itself). They are very easy to apply and we promise, you'll have fun doing it! 😊

- (1) Clean the lower body and rocker panels where the stripe will be applied with soap, a chemical solvent such as Goo-Gone or Windex (w/ammonia), and then **rinse** with water and **dry** the application area. Also, wash your hands well.
- (2) The next step is applying the stripe, but here's some tips to make the application look perfect:
  - a. The entire stripe is **pressure-sensitive**, meaning if you lightly apply it against your Mustang's body, it will stick, but can be gently removed to reposition it. **HOWEVER**, once you apply *pressure* to the decal material, the stripe is applied and cannot be reused if removed.
  - b. Each of your stripes was cut for a specific side of your Mustang. The word "**MUSTANG**" (or other model name) will be located – once the stripe is applied – on the driver and passenger-side doors, closest to the **FRONT** wheel. It will be easy to tell the difference between the stripes just by looking at them.
- (3) Begin by peeling off the stripe, which will stick to a semi-clear layer. Please note that at this point, **the adhesive side of the stripe is exposed**. To keep the stripe clean, you can temporarily rest the stripe on your Mustang's roof (if there is no wind) or a clean garage floor, etc.
- (4) Apply the stripe starting at the **REAR** wheel with the word "**MUSTANG**" (or other model name) closest to the **FRONT** wheel. Place the stripe so that just 1 inch extends past the wheel well. Lightly pat this end to stick while you extend the stripe to the **FRONT** wheel, where it may extend 1 inch or more past the wheel well. Level the stripe by eye or with a measurement tool and then smooth it on using a credit card (really!), squeegee, or any dull and flat object.
- (5) Finally, remove the semi-clear layer by pulling it parallel to the surface of your Mustang, meaning don't pull the semi-clear layer straight up. Use an Exact-o-Knife (razor) to cut the stripe to within 1/8 an inch wherever it passes over a crevice or edge (like the wheel well areas). We also recommend smoothing the stripes and avoiding a carwash during the next 24 hours since those high-powered jets and brushes are sometimes **too** strong.

### △ PRECAUTIONS △

Do not apply these decal stripes in **very** cold/warm weather; allow vehicle to cool/warm inside a garage before doing so. Also, do not even attempt to apply decals during *windy* days, because they cannot be reused if the adhesive side touches the ground after an accidental fall.
